

**Claims:**

1. A cap blank, comprising:  
a body including a first side, a second side and a brim, each of said first and second sides having a free end; and  
a crown having a free end;  
wherein said free ends of said first and second sides are joinable adjacent to said free end of said crown.
2. A method for providing a cap, comprising:  
providing a cap blank including a crown and a body having first and second sides and a brim, said crown being in a substantially planar state;  
joining said first side to said crown; and  
joining said second side to said crown;  
wherein said crown is in a folded state after said first and second sides are joined to said crown.
3. A method for providing a cap, comprising:  
providing a cap blank including a crown and a body having first and second sides and a brim, said crown being in a substantially planar state;  
joining said first side to said crown; and  
joining said second side to said crown;  
wherein said crown is fully adjustable and can be made to simply fit virtually any size head.
4. A method for providing a cap with substantial planes, comprising:  
providing a cap with three large planes that are easily viewable and have the ability to be easily printed on for advertisement purposes;  
and the ability for the side planes to have redeemable coupons printed on them.
